#### EXPLANATION OF PRICE LIST

The figures 2-1, and 2-2-1 represent the number of years the trees have been in the seed beds, the number of years in the transplant beds, and the number of times transplanted. In every case the first figure indicates the number of years the trees remain in the seed beds before being transplanted. Each dash represents one transplanting. Each figure after the first indicates the number of years the trees remained in the transplant bed. The total of the figures indicates the age of the trees. Thus a 2-2-1 White Spruce is a five year old tree which remained in the seed bed two years, was transplanted, and remained in the transplant bed two years, was then transplanted again and remained in the transplant bed one year.

#### WEIGHT

There will be some variation in the weights estimated below due to the different varieties and the different types of soil in which the trees are grown. On an average the trees including packing material, and crates will weigh per thousand approximately as follows:—2 year seedlings, 7 lbs.; 3 year seedlings, 15 lbs.; 3 year transplants, 28 lbs.; 4 year transplants, 80 lbs.; 5 year transplants, 200 lbs.

#### Our Guarantee ...

Ninety per cent of all trees sold at our regular prices as quoted in this price list (except seedlings) are guaranteed to live. If you will notify us before October 1, 1944 of the number over 10% which do not live, replacement will be made. Shipment will be made by express collect.

In other words, we guarantee that 90% of the trees you buy will live. We will ship you enough trees next fall so that the total you have will equal ninety per cent of the number you originally purchased. SEEDLINGS ARE NOT GUARANTEED TO LIVE. If we are unable to furnish replacements in the exact size which you purchased, we will furnish them in the nearest size. Trees shipped by freight or truck not guaranteed.

#### TIME TO PLANT

Planting should be done during the time of year when the trees are not growing, which means from September first until the ground freezes in the fall, and from early spring until about the middle of May. We do not recommend the planting of forest trees on wet loam, or clay soil in the fall, (on this type of soil the action of the frost during the winter will throw the trees out of the ground). Fall planting on light, well drained, or sandy soil is very satisfactory.

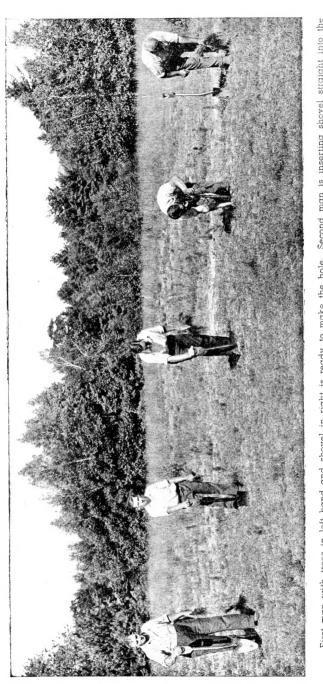

#### WHAT TO PLANT

In general, pines for lumber, spruce for pulp, American Arborvitae and Larch for posts and poles, fir and spruce for Christmas trees.

#### CHRISTMAS TREES

Ask for our special information bulletin on growing Christmas trees.

We have now secured a new supply of planting tools, but the supply is limited. If you are planning to purchase one of these tools for either fall or spring use, we suggest that you place your order immediately.

ground. Third man has inserted the shovel and has the handle pushed ahead, forming opening for tree back of shovel. Fourth man, while keeping shovel pushed ahead with his foot, has taken one tree from the bundle carried in his left hand and is putting it in hole. First man with trees in left hand and shovel in right is ready to make the hole. Second man is inserting shovel straight into the ground. Third man has inserted the shovel and has the handle pushed ahead, forming opening for tree back of shovel. Fourth man, On cleared land such as shown in this picture, one trained man can easily plant 1,000 trees a day.
